WHEAT SWUNG OVER TO THE BULL SIDE OF ACCOUNT.

Corn Was Also a Little Bit Better, but the Gains Were Small-

Oats About Unchanged.

Office Republic, Friday, June 29, 1909. There was not much stir to speculation or movement to prices this morning, and for some considerable time after the opening the different grain markets were almost stationary, such changes as took place in values being confined to extremely narrow limits. Traders seemed to be in doubt, operating with the greatest caution, and it was not until more than half the session had passed that the different markets assumed any definite course. In fact, tamer or more uninteresting markets have not been witnessed since the buil up-turn started and the boom fairly began. This state of hesitancy was undoubtedly due to the fact that the early advices were as much bearish as bullish and there was little or no outside speculative interest. However, there was not the weakness shown as has been witnessed of late, but a fairly good undertone of firmness, which became more and more pronounced as the day advanced and traders regained confidence. During the last half of the session there poses was unmistakable strength developed, speculation livened up and prices once more got into a bull stride and advanced almost un-interruptedly to the close, which was large-ly higher for wheat, which grain was in

claimed to be greater than ever—one from a lack of moisture and hot, dry weather, and the other from too much rain, the fall in some sections being very heavy. On the other hand, Southwestern advices were gowingly nine. All cable information was beartish, they reporting declines of lead at Laverpool, and day at Lononon, while the shipments from the Argentine were 490,000 bu, larger than last week, being reported at 2,665,000 bu. Winter wheat receipts have commenced to increase, and at four receiving points were much larger to-day than they have been.

The market was slow to get a move on this morning, and hung in the wind for some time after it opened, the lost disastrous break in prices having made about taking break in prices having made about taking and outsiders flow were lower, but New York started official were lower, but New York started off at an advance of act, July selling here at 75½c and Sept. at 81c. The inter immediately railing back to 89.5c.

All reports from the rainy sections continued to come very bad, and shippers from lower river points were said to be countermanding orders for empty sacks. Show was out with one of his buillish crop estimates and the arrivals here were small, while the clearances were only 180,000 ba. Continental cables reported declines equal to 12½c at Paris, 1½c at Antwerp and 1½c at Herhar, but Liverpool recovers most of its early loss and closed at 1½d decline for the day of the strices from the rainy sections continued to come very bad, and a very builts effect here, scaring off seliers and inducing good buying support, with the result that July went up to 81½e and 8-pt. to 82½c. Besides the news from the Southeast it had a very builts effect here, scaring off seliers and inducing good buying support, with the result that July went up to 81½e and 8-pt. to 82½c. Besides the news from the Southeast it had a very builts of the strice of the day of the strice of

closing with sellers 1½c higher at 82c, and the latter 2c up at 82kc sellers. Aug. sold at 81kc to 82kc, and closed 1½c higher at the latter.

A very dragging and uninteresting state of affairs prevailed most of the day in the local corn market, which did not appear to attract much attention from either buils or bears. There were reports received early of washed-out and completely destroyed crops in the rainy districts, and also that the crop was weevy and hadly required cultivation, but from the greater portion of the surplus States the news regarding the copwas extremely favorable. For instance, the llinois State report said that the acreage was fully as large as last year at 8 per cent. Foreign market intelligence was bearish, Liverpool being reported ½d lower. Receipts were well up to the recent daily average and shipments heavy. Arrivals at Western markets were \$6,000 bu, assainst \$22,000 bu, last year, including \$1,200 bu, locally, against \$6,000 bu. a year ago. Shipments were posted at \$63,000 bu, but export clearances were only \$55,000 bu. The opening here was quiet at ½c advance at 41½c for the July option, but that much lower for Bept, at 42½c. The market dragged very much after this start. There was no buying support and values declined steadily until finally there were sellers at 41½c for July, and at 42½c for Sept. The advance in the higher-priced grain helped corn quife materially as far as values were concerned, and there was a good improvement, but speculation was not much benefited. July sold at 41½c and closed at that asked, or ½c up for the day. Sept. closing also ½c better at 43½c for Sept. The advance in the higher-priced grain helped corn quife materially as far as values were concerned, and there was a good improvement, but speculation was not much benefited. July sold at 41½c and stronger late, but the situation in a speculative way was duil and featureless. The receipts at Western market amounted to 412,000 bu., against 300,000 bu. last year, including \$5,400 bu. bere shippers boug was

was unmistakable strength december as pulation livened up and prices once more not into a bull stride and advanced almost uninterruptedly to the close, which was largedly higher for wheat, which grain was in the lead both as regards strength and activity.

The market for wheat at this point his morning was a haiting and hesitating one, and it was some little time after the opening before traders had made up their minds which side of the account to favor. Both bulls and bears alike were backward and timid about making ventures, and the market was slow and dragging up to almost the hour of noon. Then, encouraged and emboldened by some very buillish conditions, the market got into a bull stride, and from that time until the close the tendency was toward a higher level and bull sentiment flourished. The early run of news was as favorable for the longs as it was thought that a reaction was about due, there was more strength than weakings was hought that a reaction was about due, there was more strength than weaking was hought that a reaction was about due, there was more strength than weaking was had a strength of the most influential early bull items was thought that a reaction was about due, there was more strength than weaking was had and the condition of winter wheat is in the strength of the most influential early bull items was the most influential early bull items was thought that a reaction was about due, there was more strength than weaking was had and unfavorable influence upon department was prone to be builtish, and as it was thought that a reaction was about due, there was more strength than weaking was allowed the most influential early bull items was the most influential early bull items was the most influential early bull items was thought that a reaction was about the cast, in which sections the family bull items was the most influential early bull items was thought that a reaction was about one of the most influential early bull items was the best of it; but, as sentingly and which was said to be d
